

A Decentralized Community Driven Update

What We Know

- ⬡ Main Net was launched 2/16/2020 without an official Enigma Update
- ⬡ The Main Net is chain independent - launched on Cosmos
- ⬡ The new token ticker is SCRT “Secret Contract Token”
- ⬡ There are 50 million SCRT in existence
- ⬡ Binance is a validator on mainnet and would help facilitate the swap from ENG to SCRT

Comparison of ENG to SCRT

ENG

86,869,315 circulating supply

SCRT

Roughly 50 million of circulating supply

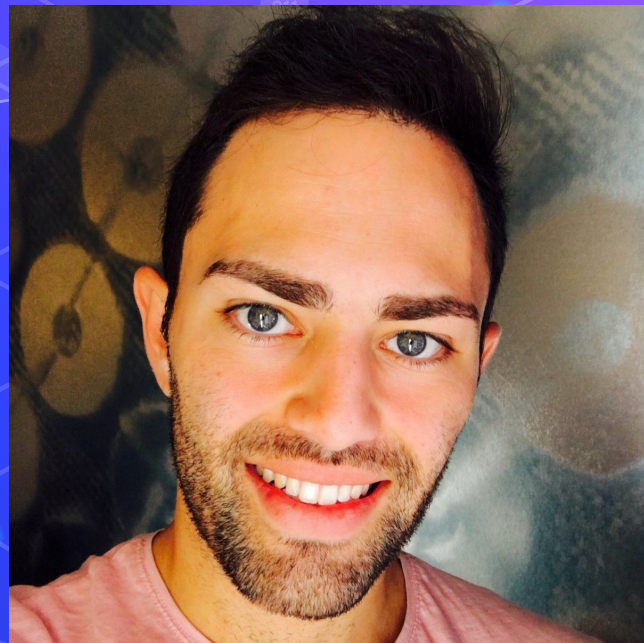

The path forward has always been the Enigma core development team and the community together. We (the team and community) are working **very hard to ensure the community has even more direct ownership of more and more of the project.**

Having more community influence and involvement in no way implies the team is reducing its involvement.

It just means more energy and impact for all of us together.

Please be respectful of other community members in this channel.

-Tor Bair, Head of Growth @EnigmaMPC

The team is currently prohibited from speaking due to third party interference.

“

There are multiple long posts prepared that can give guidance and answers and **I am currently prohibited from sharing them.**

It is not for me to prevent the Enigma community from using whatever channels they like to discuss the project. My responsibility is to enforce the rules in official channels and share information whenever possible and permitted.

I must stress that we do not like the current lack of clarity at all. It hurts all of us.

-Tor Bair, Head of Growth @EnigmaMPC

Community Driven Action

- Validators are posing Stage 1 of a token swap from ENG to SCRT - this has yet to be voted on and would be voted on through the protocol using SCRT

Community Proposal #1

“For the community to create and provide a concise framework to adhere to for submitting proposals. Which should include an agreed format for technical specification of features and a rationale for them. A Proposal could be split into either informational or protocol. Examples of other chains guidelines: “

<https://github.com/tronprotocol/tips#tips-guide> &
<https://github.com/bitshares/bsips/blob/master/bsip-0001.md>

<https://explorer.mainnet.enigma.co/proposals/1>

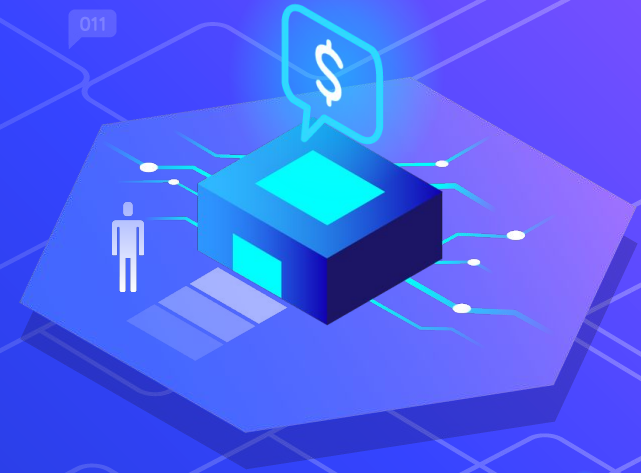

Community Proposal #2

“I propose we collectively find a way to achieve a token swap so we can unify the Enigma Community. We already have a diverse set of people ready to build on enigma, participate in governance, stake, and run nodes from all around the world.”

-ian@secretnodes.org

<https://github.com/secretnodes/secretnodes.org/issues/13>

<https://explorer.mainnet.enigma.co/proposals/2>

Become a Validator

- ⬡ Becoming a validator for the new blockchain is easy and is a powerful step in helping decentralize the network

Validator Specs:

Ubuntu Server 18.04 LTS recommended

Full Steps To Become A Validator Linked Below

<https://secretnodes.org/#/tutorials/deploy-enigma-fullnode>

**Your vote matters.
Become a validator,
vote, and make a
change.**

“We are shifting to making changes as a decentralized protocol, while there is risk and fear involved with the rapid pace of change, we are confident the future is bright.”

-Carter W. of the Enigma Collective
